Powered-air Navitek® helmets are now available in supplied air version, thanks to the new Airkuba® regulator approved according to EN14594 certification and the new EU regulation 2016/425.

New supplied air regulator Airkuba® for Navitek® !

Powered-air Navitek® helmets are now available in supplied air version, thanks to the new Airkuba® regulator approved according to EN14594 certification and the new EU regulation 2016/425. Airkuba® allows to regulate 3 to 8 bars pressure from the breathable supplied air network in order to provide adjustable airflow from 190l/m to 280l/m in the headtop. A sound alarm warns the operator in case of drop pressure. Perfect for welding, grinding and cutting in confined environment and/or fixed positions, Airkuba® offers a technical, easy to use and low-maintenance solution. Airkuba® is available with powered-air Navitek® S13 with colors and contrasts restitution, Navitek® S4, Navitek® Clear Visor, and Navitek® DIN 5 Visor.
