

Why side vision ?

The side visions on the Kapiro* and Navitek* helmets are shade DIN 5 polycarbonates.

This DIN 5 shade enables the welder to clearly see through these side openings and benefit from a 160° vision of his/her close environment, resulting in improved safety and increased comfort.

However, shade DIN 5 is the minimum safety shade authorized, blocking 99,99% of UV and IR rays. It is therefore impossible to get injured by a welding arc.
